Import Data using Transform Maps

Phase 1 – Brainstorming & Ideation

Project Idea

The project focuses on importing external data into ServiceNow using Import Sets and Transform Maps.

Objective

To transfer source data into the required ServiceNow target table accurately and efficiently.

Problem Statement

Manually entering a large amount of data into ServiceNow can be time-consuming and may lead to errors. This project provides a structured way to import and transform data.

Proposed Solution

Use ServiceNow Import Sets and Transform Maps to load source data, map fields, transform the records, and place the final data in the target table.
