Import Data using Transform Maps

Phase 2 – Requirement Analysis

Software Requirements

• ServiceNow instance
• Web browser
• Import Set
• Transform Map
• Target Table
• Source data

Functional Requirements

• Import source data.
• Create an Import Set.
• Create a Transform Map.
• Map source fields to target fields.
• Transform and load the data.
• Verify the imported records.

Expected Result

Source data should be successfully transformed and inserted into the required ServiceNow target table.

Non-Functional Requirements

The process should be understandable, repeatable, and accurate, with the imported records available for verification.
