Import Data using Transform Maps

Phase 3 – Project Design

System Workflow

Source Data → Import Set → Import Set Table → Transform Map → Field Mapping → Transform → Target Table → Final Records

Design Description

The source data is first loaded into an Import Set table. The Transform Map defines how source fields correspond to target fields. Field mappings are configured and the transformation is executed. The transformed records are then loaded into the target table.

Main Components

1. Source data
2. Import Set
3. Import Set Table
4. Transform Map
5. Field Mapping
6. Target Table
