Import Data using Transform Maps

Phase 5 – Project Development

Development Overview

This phase contains the actual implementation of the Import Data using Transform Maps project in ServiceNow.

Development Process

1. Prepare the source data.
2. Import the source data into ServiceNow.
3. Create or use the Import Set Table.
4. Create the Transform Map.
5. Configure source and target fields.
6. Create field mappings.
7. Run the Transform.
8. Verify the transformed records in the target table.

Project Files

The project includes the ServiceNow update-set XML file: sys_remote_update_set_88b4e4de83eb4710b8aa16dfeeaad303.xml and the project document: Import Data using Transform Maps (2).docx.

Implementation Result

The implementation demonstrates the flow of source data through the Import Set and Transform Map into the target table.
