Import Data using Transform Maps

Phase 6 – Project Testing

Testing Objective

To verify that the imported data is correctly transformed and loaded into the target table.

Test Cases

Test Case	Expected Result
Import source data	Data should be imported into the Import Set.
Transform data	Records should be transformed successfully.
Field mapping	Source fields should map to the corresponding target fields.
Target table	Transformed records should appear in the target table.
Data verification	Imported values should be available for verification.

Testing Result

The project workflow is designed to verify the successful import, transformation, field mapping, and loading of records.

Note

Actual screenshots or test evidence from the ServiceNow instance can be added to this PDF before final submission.
