Import Data using Transform Maps

Phase 7 – Project Documentation

Introduction

This project demonstrates how external data can be imported into ServiceNow using Import Sets and Transform Maps.

Objective

To import, transform, and load source data into a ServiceNow target table.

Technologies Used

ServiceNow, Import Sets, Transform Maps, Field Mapping, and a ServiceNow target table.

Working Process

Source Data → Import Set → Transform Map → Field Mapping → Target Table

Project Files

ServiceNow update-set XML and the project document are maintained as supporting project resources.

Result

The project demonstrates a structured process for importing and transforming data in ServiceNow.

Conclusion

The project provides a structured approach for transferring external data into ServiceNow and reduces the need for manual data entry.
